

AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph beginning at page 8, line 16 as follows:

In Fig. 3B, after time t_2 , when the voltage at the node N_2 crosses the voltage at the node N_1 , the voltage at the node N_2' may be lower than the voltage at the node N_1' , as indicated by X in Fig. 3B. This would invite a reverse adjusting operation of the duty ratio adjusting circuit 1. As a result, a return time T_2 is relatively large. Thus, the operation of the duty ratio correcting apparatus of Fig. 1 cannot be guaranteed.
